

NEW WORLD GENERATION INC.

January 31, 2015

Dear Shareholder,

I hope this note finds you well and warm.

NWG has been able to utilize the validation report from the National Research Council (NRC) to make some preliminary introductions in the electrical industry. A Utility in Ontario has expressed interest in learning more, and NWG has been asked to follow up with this company in 30 days.

As noted in previous correspondence, one of the biggest challenges for new comers within the energy storage market is certification and insuring their technology. NRC has been a valuable technical partner, and we remain in communications. One challenge NWG has had in working with a Government Agency is the time it takes to receive contract approval and start dates within the test facility. NWG is investigating the possibility of working with SNC Lavalin to validate the final portion of the system, which focuses on the re-heat portion. A request for Proposal has been drafted and under review.

Our new patent attorney has been helpful in opening doors for NWG and is arranging an introduction with a large investment firm in Canada.

We continue to put all effort into moving our business ahead to create a return, and will continue to keep you posted as to our progress.

With regards,

Peter Routliff, NWG Chair
